

Hi! We are boys and girls from 3<sup>o</sup>A at Farè school and we would like to introduce and show our project **“Together in Expo”**.

It is a playful educational project that it has involted **schools from all the world**.

We have competed with the others schools, doing missions about the subject of expo 2015: feed the planet, energy for life.

To finish our missions we have made practical and excited activities that have interested and involved us directly.

Now we want to show you two of them. The mission number 42: **“To make a tree a seed is needed”**.

We have started our mission studying some fruits and counting the seeds. And we have realized that there are lots of different kinds of apples.

Then, we have decided to go trough the topic, organazing an “Apples tasting”. After analysing the apples, we have tried them!

The other mission was the mission number 80, which was called **“Food recycling”**.

We have made a special menu, where dishes were cooked in our kitchens, using only advanced ingredients. Some dishes were also eaten in class.

This mission has also helped us to reflect about the fact of alimentary waste, and it has learnt us to eat food in a more conscios and fair way.

Being an international project, we have used both **English** and **Spanish**.

We have improved our competences in the use of **new technologies** and we have increased our awareness about the use of Internet and social networks.

Infact we have used Internet to do our researches and we have created also an

**Instagram** profile where we have shared photos, videos and text messages.

To fulfill of the project, we have created a **multimedial recipe book** with a Spanish school, the school Luis Manzanares, of Torre Pacheco: our twin school.

The first contact with Spanish students were by email but after with great enthusiasm we met thanks to **Skype**.

At first the videocamera excited us but in the end our experience was

interesting and funny and we discovered that on the other side of the monitor there are students as nice and as brilliant as us.

The paper recipe book was also sent to our friends of the "**Jilore Primary school**" of Malindi, in Kenia and we have become their twin school last year. In the end, we would tell you that this experience enjoyed us a lot and they made our school-trip more rich, interesting and multilingual.

Moreover, we visited Expo Milan 2015 and so the pavilions and we liked them very much. 😊
